Funding Guide

Where's the Budget for In-School Test Prep?

It's hard to come up with funds to pay for many of the tools you need at your school. Test prep isn't always at the top of the priority list, but it can be!

Check out your funding options and continue your testGEAR subscription next year! Here are just some of the available funding programs you can use to purchase testGEAR....

Title I

Funds are used to improve teaching and learning, enabling low-achieving children to meet challenging state content and student performance standards. Test prep services are currently widely used in Title I programs for students during school hours, after school, and even at home. In Title I, school-wide programs and test prep are provided more often than in targeted assistance schools.

Individuals With Disabilities Act (IDEA)

Encourages districts to increase academic achievement of special education students as measured by state assessments linked to state content standards. Another goal is to reduce the achievement gap between special ed and non-special ed students. TestGEAR can ensure that special ed students pass high school exit exams and graduate with regular diplomas rather than alternative certificates.

21st Century Community Learning Centers

Designed to provide support for after-school and summer school programs for students at risk of failing state assessments, as well as to provide enrichment instructional programs aligned to state standards. In 2002, it was refocused to provide "expanded academic enrichment activities" for children in low-performing schools in reading, math and science.

Title II, Part B Mathematics and Science Partnerships

A major component of the Bush Administration's initiative to improve the achievement of American students in mathematics and science by enhancing the teaching skills and content knowledge of classroom teachers. testGEAR is an effective way to improve student scores on math assessments.

Title II, Part D State and Local Technology Grants

Designed to help all students become technologically literate by the 8th grade and encourage the use of technology to promote parent and family involvement in education and communications among students, parents, and district staff. Twenty five percent of a competitive Title II D grantfunded project must be used for professional development.

Qualified Zone Academy Bonds

An interest-free loan program for individual schools to (among other things) upgrade the quality of their curricula. A public school must be located in an Empowerment Zone or Enterprise Community or there must be "a reasonable expectation that at least 35 percent of the school's students are eligible for the free or reduced lunch program." QZAB provisions allow for the upgrade of school curriculum. Upgrade YOUR curriculum with testGEAR.
